Automatic generation of parallel processing variant

Question

Is it possible to generate parallel processing objects automatically?

Answer

Unfortunately, it is not possible to schedule transaction FQD2 or the related program RFKKDI05 in background because the report needs interactions from the end user which is not possible in a background process.

Workaround

The function module FKK_DI_VARIANT_REFRESH could be useful in a possible customer report. This function module generates the exported variant of the parallel processing object. But it is important to know that the function module is not released and therefore SAP does not make any claims regarding the release independence of the interfaces and the continuing existence/functioning of the modules. The SAP note 109533 provides more information and consequences regarding the function module release status.
