Transactions OS06 and OS07

Transactions OS06 and OS07 are used to monitor the operating system of the application server (OS06) and of a remote server (e.g. liveCache server - OS07). These transactions replace Transaction ST06.

Useful Information

Normally no SAP instance is installed on the liveCache Server. Therefore you need to install programs RFCOSCOL and SAPOSCOL on this server. Further information is available in note 371023 (SMP Login required).
