Status and Tracking System

Purpose

The BW-BPS Status and Tracking System is to monitor the progress of the different planning tasks within the company. The system keeps a record of the iterations which run through a specific planning task in practice (requirement notification bottom-up, resource assignment top-down) and brings together the planning objects created in the planning environment with the employees who use these objects to process the actual planning tasks.

Overview

- Authorization Objects in the STS
- Maintaining Web Services for STS
- Customizing the Status and Tracking System
- Planning with the Status and Tracking System
- Integrating BI Integrated Planning
