Prerequisites for using BEx Broadcaster

Starting with Netweaver 7.0 you need to use the new BEx Broadcaster 7.0 (see note 1935951). Be in mind that BEx Broadcaster 3.x is no longer supported (see note 2044155 - BEx Broadcaster 3.x is not supported).

1 - For using BEx Broadcaster please check following points:

- You must maintain a BI JAVA Enterprise Portal as your default portal, connected to Netweaver ABAP stack.
- You have to configure the integrations between ABAP and JAVA stacks.
  - Refer to note 1935951 and the following documentation Automatically Configuring BI Java
- Ensure the template OBROADCASTING_TEMPLATE is activated. If is not, see note 1922024 in order to activate this template.
- In Tx RSCUSTV27 maintain the field "Broadcasting" empty.

2 - SAP NetWeaver BI Diagnostics & Support Desk Tool

- Please execute the 'SAP NetWeaver BI Diagnostics & Support Desk Tool' to check and confirm a 'green result' the configuration of your system SAP NetWeaver BI installation.

According note 1177154 a **COMPLETE GREEN** Diagnostic Tool is mandatory for a error-free broadcasting.
- If result shows **RED** items please correct it:
  - The tool provides a solution for each of the red items.
  - Please also read notes 937697 and the in note mentioned 'related/referenced notes' to get help for correcting the configuration.
  - KBA 2113395 guides you with step by step descriptions to correct any red alert.
  - You may need to involve your JAVA administrator to correctly configuration of the system.
  - Still experience **RED** alerts, involve the **BW-BEX-ET-WJR** team to guide you to solve the case.

According KBA 1899396 and note 1789842 **BI Java patch level 0 is not supported** because it does not include all the subsequent corrections delivered in patches for lower SPS levels.
- If you are using patch level 0 it is mandatory to raise the patch level for BI Java.

3 - How to start the new BEx Broadcaster 7.0:

- The BEx Broadcaster can be started in BI Java Portal or with any BEx tool.
- Please review Online Documentation: Calling BEx Broadcaster
- In Portal: After logon, navigate to “Business Intelligence”, here you can find the BEx Broadcaster.
- In Tx RSRT: Execute the query using button 'JAVA Web'.
  - This executes the query in JAVA WEB / WEB Analyzer.
  - Press button 'Send' or use the context menu Option 'Broadcast and Export' to call the BEx Broadcasting Wizard.
- In case you cannot start BEx Broadcaster please review wikipeage: Checklist for issues during creation and editing of Broadcaster-Setting to fix it.
